BÉLL POTTER

Pass me the green

Inside this edition we revisit the integration of Ethical, Social and Corporate Governance considerations through Exchange-Traded Funds (ETFs).

Given this is a popular and growing sub-segment of the funds management industry, we both look to the future and review past performance outcomes from the current listed product suite. Our findings suggest that clients have been inadvertently positioned into Information Technology and growth stocks as a result of product take-up. This can result in greater tracking error and detract from product/issuer core competency.

Bell Potter is of the view that a value or style neutral manager; and more importantly with an impact focus, can function as both a cornerstone or satellite piece in the current market of addressing ESG requirements (continued on page 2).

Unwinding in product concentration will prime additional growth

Growth has been concentrated in global equity mandates that optimise an index through light exclusionary screens and/or positive tilts. This has provided investors with beta and little tracking error against broad market indices while satisfying a fiduciary or altruistic objective. Despite continued ESG proliferation, both fund flows and recorded FUM has traditionally favoured these incumbents in concentration.

The number of exclusionary screens on offer has continued to extend in an effort to capture investor demand. The launch of new 'ESG' ETFs is also outpacing prior periods. On headline numbers across both domestic equity and global equity mandates, 13 ETFs (13 global, 0 domestic) were listed within calendar year 2022 versus 6 ETFs (4 global, 2 domestic) for calendar year 2021. This is an equivalent 111.6% rise in the headline product count that was underlined by a 225.0% in global equity mandates all on pcp.

ESG ETF closures are yet to become a meaningful trend. UBS terminated a number of their ETFs in early 2020 that were considered unviable due to insufficient scale that resulted in disproportionate costs as a percentage of the net asset value for each terminating fund.

ETHI (BetaShares Global Sustainability Leaders ETF), which fully and physically replicates the Nasdaq Future Sustainability Global Leaders Index, has attracted 26.3% and 24.9% of positive net money flows holistically across ESG equity products for the last 12 months and 24 months respectively. The underlying index is weighted according to the float adjusted market cap of identified constituents from developed markets globally excluding Australia. Companies must also satisfy high liquidity requirements, pass certain eligibility thresholds determined by the Responsible Investment Committee and record a Carbon Efficiency that is at least 60% above the industry average on a GICS basis.

Preferential treatment for products that circumvent harmful outcomes while benefitting stakeholders is sentiment positive for new entrants that are actively seeking investment opportunities or themes. We believe this appetite should be conducive to further growth.

Broadening thematic overlap plus active input

The developing narrative for ETF issuances that target ESG solutions are increasing predicated on both under-penetration and broader thematic successes across the sector. Our perspective for continued convergence is based on a growing list of ETFs focused solely on the Environmental side of the equation. While light exclusionary core beta products do screen for activities such as Board Composition (gender equality), Human Rights and Payday Lending; the Social and Governance factors are yet to be directly represented in an ETF wrapper. This could be due to liquidity or attribution requirements, however we would argue that the security analysis herein would create a more fertile ground.

Figure 10 - Directly accessible ESG related sub-themes

Interestingly, flows into ESG related sub-themes have accelerated as markets emerged from March 2020 lows, where concentration in core beta exposure has correspondingly declined as an overall percentage. Issuance volumes have been consistently targeting 'beta plus', the middle ground between core and satellite exposures with a rules-based-tailored-construction that can be offered at a palatable price point.

ESG is not yet surmised as a scale game. BetaShares and iShares conducted a series of repricings late in February on their S&P/ASX 200 ETFs. Together, they now boast a combined FUM of \$6.5bn (Jan 23) (IOZ \$3.8bn; A200 \$2.7bn). iShares Core S&P/ASX 200 ETF (IOZ) features a management fee of just 5bp, expressed as a percentage of assets per annum; which reflects a 44% cut to the original price of 9bp. BetaShares Australia 200 ETF (A200) then followed suit and decreased its respective fee from 7bp to 4bp.

Active managers with the capacity to utilise pre-established FUM are continuing to open unlisted mutual funds, and at a lower than traditionally seen rate cards, to investors who prefer the flexibility of listed products with liquidity. Although this is cost intensive at the margin, price sensitive investors from are more likely to participate in the take-up. Recent issuances have come in at over 50bp per annum for internally managed fee arrangements.

Increased scrutiny and regulation will drive satellite product development

Bespoke investment management services now exist to provide a mix of both quantitative and qualitative data around the sustainability and governance aspects of businesses; and this is becoming a key driver for ESG product proliferation. Data quality, however, needs to be further developed in order to combat disclosure standards across different jurisdictions, limited coverage and some asymmetric definitions. This will be a tailwind for sustainable investing more generally, however we still continue to view the value-add of active oversight that quantifies a dimensional shift to renewables and segment efficiencies on top of the known shutdowns for high emission facilities.

Within satellites, factor neutral / differentiation should gain unequivocal traction

The pace of economic growth has slowed since the 2008-2009 Global Financial Crisis (GFC). Central Banks in response attempted to ameliorate the effect and restart activity. Domestically the Reserve Bank of Australia lowered the official cash rate significantly, and the Australian Government undertook expansionary fiscal policy. Starved of growth, investors looked to companies that could deliver earnings growth, venture capitalists easily raised money and securities traded at even higher premiums.

A reversal in these conditions should equivalently place a headwind on valuations and earnings growth for companies now cutting labour costs. Differentiated 'ESG' ETFs that feature a value style bias or are factor neutral in their overall philosophy to the investment process should release some of the current saturation and benefit in the near-term. They will also be the beneficiary of flow and FUM as investors pivot into outperformance.

Many global equity 'ESG' ETFs that weight constituents according to a float adjusted market cap regime; and with an exclusionary screen overlay, share similar top holdings and style tilt. As a result we expect relative compression here while the impact investing side captures more of money flow. We believe thematic investing sits in the middle ground. It is often required to be founded in evidence - meaning that the growth or trend has already occurred to some extent. This delivers a degree of beta while being removed from a scattered allocation across geographies or industries, but also adds concentration risks.

ESG data is similarly skewed - in that it is fundamentally backwards looking. High IRR opportunities exist in upcoming businesses that are more nimble and beneficial of change. This includes businesses that are poor performers from an emissions perspective. Positive de-risking in the business model should drive a re-rating for enterprise values and fuel outperformance. Not every industry is categorically good or bad in a static fashion. In this respect, the approach to investing is quite similar to small cap equities.

Most indices will screen out Energy in a blanketed fashion. Last year it was the cyclical segments of the market, that are largely underrepresented, which uniquely afforded downside protection and positive performance.

Concluding thoughts on ESG product growth

In closing, data across FUM, flows and incumbency rates indicate that ESG ETFs are primed to continue becoming more granular and prevalent on the ASX. Given the exponential number of product issuances, retail investors are obviously appealed by ESG-related trends but remained overexposed to beta-like solutions that already exist at the core of portfolios.

Individual client requirements across the green spectrum should result in a greater amount of product wins with an expansion in satellite solutions that are likely to accelerate growth from bereon

The appetite of Australian investors for thematic products is another driver. The convergence of 'ESG' sub-categories with other rules-based technologies, of which some remain under-represented on the Social and Governance side, should see greater cherry-picking of under-researched areas of the market across value, growth, large, mid and small caps.

Global equity performances

- The average market cap of constituents exceeds the median market cap, meaning the invested universe is skewed to the left. In other words, a higher ascribed weight to mega-caps. Mid-to-small-caps meanwhile feature in number, but at negligible weights, relatively speaking. Broad indices with greater holdings will be more likely to exhibit this characteristic due to the construction methodology.
- With this in mind, portfolio overlap in the top 10 securities between IWLD and VESG is at a high of 73.7% (on 6 March 23 figures). Commonly included securities that feature as a relative overweight are: Apple, Microsoft, Alphabet Class A, Alphabet Class C and NVIDIA.
- Quantitatively there is style concentration risk. Core ESG indexes, relative to the MSCI World ex-Australia Index (i.e. VGS), feature investments that trade on higher multiples. Investors pay more indirectly for both a dollar of company sales and earnings. We see risk in the current market where investors have tempered growth expectations and value cash generation.

Global equity performances (continued)

The figure below details cross-correlations using the daily price returns of Funds from 12 October 2022 to 16 March 2023.

- VESG and IWLD exhibit the greatest performance correlation within ESG equities while S3GO and MCCL sit at the antithesis.
- NAVs and Unit Prices have broadly shifted down in response to rising yields; reflecting that the magnitude of corporate cash flows are contained further out into the future. This is another sign of the heavy growth aspect embedded within Technology and broader securities chosen through passive methodologies.

SOURCE: BLOOMBERG. DATA AS AT 23 MARCH 2023. 'DISTRIBUTION YIELD IS BASED ON THE SUM OF AMOUNTS THAT HAVE GONE EX-DIVIDEND OVER THE PAST 12 MONTHS.

^EFFECTIVE DURATION - AN OPTION ADJUSTED MEASURE OF THE SENSITIVITY OF THE VALUE OF THE PORTFOLIO TO CHANGES IN INTEREST RATES. IT IS USED TO CALCULATE AN APPROXIMATION OF THE MODIFIED DURATION OF A BOND WITH AN EMBEDDED OPTION.

*MODIFIED DURATION - MEASURES THE SENSITIVITY OF THE VALUE OF THE PORTFOLIO TO CHANGES IN INTEREST RATES. IT FOLLOWS THE CONCEPT THAT INTEREST RATES AND BOND PRICES MOVE IN OPPOSITE DIRECTIONS. A MODIFIED DURATION OF 6 YEARS IMPLIES THAT A 1% INCREASE IN THE INTEREST RATE WILL REDUCE THE VALUE OF THE PORTFOLIO BY 6%; AND VICE-VERSA FOR A DECREASE IN THE INTEREST RATE.

SENSITIVITY DATA AS AT 31 DECEMBER 2022.

Appendix A: Glossary of terms

Active Management: Investing with the goal of outperforming a benchmark index.

Alpha: A manager's return relative to the return of a benchmark. For example, consider an active manager with the S&P/ASX 200. If the manager returned 5% when the S&P/ASX 200 Index returned 4%, then the alpha would be 1%. Note that alpha can be both positive and negative, shown as outperformance and underperformance, respectively.

Authorised Participant: Large investors, institutions, exchange specialists and arbitrageurs that place orders for creation units with the fund's distributor.

Beta: In the context of this report, beta refers to the sensitivity of in response to swings in the market. A beta of 1 indicates that a fund's unit price return will move in line with a benchmark. Whereas, a beta of greater than 1 indicates that a fund's unit price return will be more volatile than the market, and vice versa.

Credit Rating: Forward-looking opinions about credit risk based on the ability and willingness of an issuer, such as a corporation or government, to meet their financial obligation in full and on time.

Derivative Replication: The process in which a portfolio manager seeks to replicate performance.

Effective Duration: An option adjusted measure of the sensitivity of the value of the portfolio to changes in interest rates. It is used to calculate an approximation of the modified duration of a bond with an embedded option.

Exchange Traded Fund (ETF): Investment vehicles that are constructed in the same nature as a mutual fund, but which trade on a stock exchange. ETFs combine the diversification benefits of mutual funds, with exposure to a wide array of assets in a single trade, and typically track the performance of a broad market index, sector, commodity or theme.

Franking: A tax credit used in Australia that allows domestic companies to pass through taxes that have already been paid on corporate profits. Given the trust structure, ETFs are require to distribute all capital gains, earnings and franking credits to underlying unit holders.

Free-Float: The amount of a company's shares outstanding that are available for purchase on the open market at any point in time

Full Replication: The process in which a portfolio manager seeks to replicate performance by exactly matching the benchmark in composition and weight to ensure a similar outcome. The ETF will hold 90% or more of the members of the index in this instance.

Grossed-Up Dividend Yield: Dividends paid plus any associated franking credits, if available.

Liquidity: The ability to convert a security or asset quickly into cash.

Management Expense Ratio (MER): Management Fees help to recoup expenses incurred in connection to the operation of the fund (such as administration and accounting costs, registry fees, audit and tax fees and investor reporting expenses), expressed as a proportionate value of the fund. This is calculated daily and deducted from the fund's Net Asset Value. No costs are directly borne by the investor.

Market-Capitalisation: The value of a publicly listed company, calculated as the product of price and units/shares outstanding.

Modified Duration: Measures the sensitivity of the value of the portfolio to changes in interest rates. It follows the concept that interest rates and bond prices move in opposite directions. A modified duration of 6 years implies that a 1% increase in the interest rate will reduce the value of the portfolio by 6%; and vice-versa for a decrease in the interest rate.

Net Asset Value (NAV): The value of the underlying assets of the Fund minus its liabilities, dividend by the number of units outstanding. This is typically calculated at the end of each business day.

Optimised Replication: The process in which a portfolio manager seeks to replicate an index by using a representative basket of securities. Optimisation is generally used in markets where liquidity may be limited or costs are prohibitive for full replication. The ETF will hold less than 90% of the members of the index in this instance.

Passive Management: Investing in an attempt to track the return of an underlying benchmark index or asset.

Performance Fee: Fees linked to the value added by a fun manager, calculated on the relative outperformance of the benchmark index or absolute return performance hurdle, often subject to a high watermark mechanism.

Sharpe Ratio: This ratio provides a measure of the return of an ETF's portfolio, relative to the risk taken by the investment manager in achieving those returns. A higher return is only desirable if it does not come with too much additional risk (volatility of returns).

Smart Beta: Strategy with blended components of both Passive and Active Management. It seeks to capitalise on predetermined thematic or rules-based methodologies for investing, attempting to outperform, or have less risk than, traditional broad market cap weighted indices.

Spread: The gap between the highest price that a buyer is willing to pay (bid), and the lowest price for which a seller is willing to sell (ask), on a particular security.

Appendix B: Performance Fees

KSM - 15.38% p.a. (incl. GST & RITC) of the amount by which the NAV exceeds the high-watermark. The Fund must also exceed a net 6% p.a. hurdle before a performance fees applies on total performance.

IMPQ - 20% of the Trust's net return in excess of the S&P/ASX Small Ordinaries Accumulation Index.

SMLL - A performance fee of 15.5% (inclusive of GST less reduced input tax credits) of the outperformance of the Fund may be paid to the Responsible Entity, based on the Fund's total return over the performance benchmark (the S&P/ASX Small Ordinaries Accumulation Index) in a calendar quarter.

PAXX - 15% of outperformance over benchmark (MSCI AC Asia ex-Japan Net Index (A\$)).

AGX1 - 15% of net return in excess of MSCI All Country World Net Index in AUD, net of the management fee.

MGOC - 10% of excess return over the higher of the MSCI World Net Total Return Index (AUD) and the yield of 10 year Australian Government Bonds, subject to a high-watermark.

MHG - 10% of excess return over the higher of the MSCI World Net Total Return Index (hedged to AUD) and the yield of 10 year Australian Government Bonds, subject to a high-watermark.

MOGL - 15.38% of the total return of the Fund after management fees and expenses have been deducted, that is in excess of the MSCI World Net Total Return Index (AUD), subject to a high-watermark.

PIXX - 15% of outperformance over MSCI AC World Net Index (A\$), subject to a high-watermark.

WCMQ - 10% excess return above the MSCI All Country World Index ex-Australia after Management Fee.

MICH - 10% of excess return over the higher of the S&P Global Infrastructure Index A\$ Hedged Net Total Return and the yield of 10 year Australian Government Bonds, subject to a high-watermark.

HBRD - 15.5% of outperformance above the Solactive Australian Hybrid Securities Index.

MKAX - 20% of the outperformance of 7% p.a. in any Performance Fee Calculation Period. The Hurdle is the greater of the highwatermark and the NAV per unit at the beginning of any Performance Fee Calculation Period.

MAET - 10% of the increase in the NAV during each Performance Fee Period, subject to exceeding a high-watermark and Hurdle Rate. The Hurdle Rate is the 10 year Australian Government Bond Yield + 3.5% p.a.

LPGD - 15% of excess return above the MSCI All Countries World Net Total Return Index (AUD) in any calculation period, subject to a high-watermark.

MSUF - 10% of excess return over the higher of the MSCI World Net Total Return Index (AUD) and the yield of 10 year Australian Government Bonds, subject to a high-watermark.

SHYF - 20% of excess return above the RBA Overnight Cash Rate + 1.50% in any calculation period, subject to a high-watermark.

HYGG - 20% excess return above the MSCI World Accumulation Index (AUD) (net of Management Fees), subject to a high-watermark.

MAAT - 20.5% p.a. of the amount by which the NAV per unit exceeds the high-watermark when the Fund achieves the RBA Cash Rate + 5% Hurdle.

FIXD - 20.5% excess return above the Bloomberg AusBond Composite 0+Yr Index (net of Management Fees), subject to a high-watermark.

GCAP - 15.5% excess return above the Hurdle Rate of RBA Cash Rate + 3% p.a., subject to a high-watermark.

MHHT - 10% excess return above the 10% p.a. Absolute Return Performance Hurdle, subject to a high-watermark.

GIVE - 15% excess return above the S&P/ASX 300 Accumulation Index, subject to a high-watermark.

IDEA - 20% excess return above the MSCI All Countries World Net Total Return Index (A\$), subject to a high-watermark.

FATP - 20% of the increase in the NAV during each Performance Fee Period, subject to exceeding a high-watermark.

MCGG - 10% of the Excess Return per Unit for the relevant Calculation Period (the six months to 31 March and 30 September each year), subject to a high-watermark and when outperforms the higher of MSCI World (Ex-Australia) Index (Net) (A\$) and 10 year Australian Government Bond Yield.

RCAP - 20% excess return above the FTSE/EPRA NAREIT Developed Index (AUD Hedged) Net TRI, subject to a high-watermark.

AEAE - 15% excess return (net of management fees and excluding any accrued performance fee) above the S&P/ASX 300 Accumulation Index, subject to a high-watermark.

MFOA - 15.35% excess return above the RBA Cash Rate plus 5% p.a., subject to a high-watermark.

XALG - 10% of the Fund's daily return (after fees and expenses and after adding back any distributions paid) above the Fund's Performance Benchmark and is subject to an Absolute Return Performance Hurdle.

XASG - 10% of the Fund's daily return (after fees and expenses and after adding back any distributions paid) above the Fund's Performance Benchmark and is subject to an Absolute Return Performance Hurdle.

PGTX - 15% of the amount by which the Fund's return (after the deduction of the investment management fee and excluding any accrued performance fee) exceeds a return of 6% per annum.

Please refer to the relevant Product Disclosure Statement (PDS) for full disclosure of the fees and additional costs that may be incurred in the management of the ETF.

Appendix C: How an ETF operates

ETFs are open ended securities that trade on an exchange. Open ended denotes that new products can be created and redeemed on the Primary Market, without the requirement to release a new prospectus, ad infinitum. The open ended nature of ETFs is unique to this product class, and what keeps the underlying Net Asset Value (NAV) in line with the assets' market price. This process is managed by the Authorised Participants and Market Makers who are engaged by the ETF operator to continually create and redeem shares to ensure the discount to NAV is managed within a defined range.

This results in a two tiered market structure: The Primary Market and the Secondary Market. The Primary Market is the market in which Market Makers, via the Authorised Participants, are able to create and redeem units. The Secondary Market is the market in which investors are able to buy and sell these units on an exchange.

Mechanics of the Primary Market

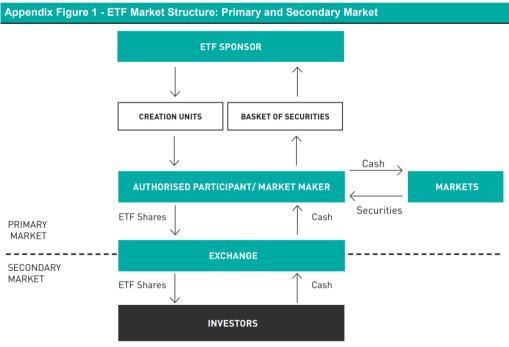

The Authorised Participant applies to the issuer to create new ETF units via creation units. In return for each creation unit, the Authorised Participant will deliver a basket of securities that has been specified by the Issuer. This basket will be transferred and held by a Custodian. Following settlement, the Authorised Participant has an inventory of ETF securities (shares) that can be accessed by the Market Makers and sold on the ASX in the Secondary Market.

The redemption process operates in a similar manner. The Authorised Participant applies to redeem the securities in creation units. In return for each creation unit, the Authorised Participant will receive a basket of securities in kind. Each ETF security effectively represents a sliver of a creation unit.

Mechanics of the Secondary Market

The Secondary Market is the market in which investors are able to buy and sell ETF units with the assistance of the Market Maker. The Market Maker will access the Authorised Participants (Primary Market) if additional inventory is required (create) or alternatively sold (redeem), to in effect make the market. Hence, the liquidity of the ETF is as liquid as the underlying market.

The Market Maker effectively ensures liquidity in the market place by quoting Buy and Sell prices during the trading day. These prices are continuously updated to reflect the underlying changes in the securities. The ETF Issuer generally has a formal arrangement with at least one Market Maker with a mandate to make the market within a specified range of spread. However, in dislocated markets, Market Makers can suspend operations until the market stabilises.
