# Market Summary.

ETF AUM accelerated in May thanks to strong equity market performance, rebounding from losses incurred in April after the announcement of US trade tariffs. Fixed income flows dominated in the month of May with a broader risk off sentiment settling in. The **Vanguard Global Aggregate Bond Index (Hedged) ETF (VBND)** was the biggest winner over the month, attracting \$308.2 million in net flows, with investors looking towards a diversified portfolio of fixed income securities as a defensive allocation amidst equity market volatility.

On a relative basis, cryptocurrency ETFs saw an uplift in net inflows, supported by strength in Bitcoin which reached new all time highs at over US\$110,000 per token. The **Monochrome Bitcoin ETF (IBTC)** saw \$53 million in net inflows, up from \$5 million the month prior with investors having a preference for lower cost providers. IBTC offers direct Bitcoin exposure through the ETF wrapper, with the fund having recently decreased its management fee from 0.50%p.a. to 0.25%p.a. whilst uniquely offering investors the option to call their Bitcoin holdings to be withdrawn upon request directly with the issuer.

Flow momentum subsided in the **VanEck Vectors Gold Miners ETF (GDX)** which saw a net outflow of \$39 million in May, having reported inflows of \$33 million from January to April. Returns from gold miners have been supported by strength in gold bullion, with the yellow metal sitting over US\$3,300 per ounce, acting as a hedge against growing geopolitical tensions. Performance for GDX has been strong, reporting a year to date return of 53% and a one year return of 67%, with recent outflows suggesting investors are taking profits post a period of strong performance.

We saw the launch of five new products in May, with the **First Sentier Geared Australian Share Complex ETF (LEVR)** marking the debut of a new manager in the ETF sector. The fund is managed by experienced portfolio manager David Wilson, with the fund aiming to generate long term growth through gearing in order to amplify returns amongst a portfolio of high quality growth companies. The underlying strategy has been running since 1997, giving investor access to one of Australia's largest and longest running geared share strategies through the ETF wrapper. The fund has an objective to outperform the S&P/ASX 100 Total Return Index over rolling seven year periods, with the fund having returned 25.1% over the last year, compared to the benchmarks return of 13.6%.

BetaShares launched a series of "defined income" ETFs in May, with three new fixed income ETFs debuting on market. Unlike other fixed income ETFs, these products have a defined maturity with investors receiving the net asset value of their units at a set maturity date. Each product holds a portfolio of investment grade corporate bonds, maturing in May 2028, May 2029 and May 2030, allowing investors to gain access to bonds previously restricted to over the counter markets, through the simplicity of the ETF wrapper. This also may allow for more complex bond strategies, like bond laddering, to be facilitated through ETFs as more products with similar features are developed.

SOURCE: BLOOMBERG. DATA AS AT 19 JUNE 2025. <sup>1</sup>DISTRIBUTION YIELD IS BASED ON THE SUM OF AMOUNTS THAT HAVE GONE EX-DIVIDEND OVER THE PAST 12 MONTHS.

<sup>^</sup>EFFECTIVE DURATION - AN OPTION ADJUSTED MEASURE OF THE SENSITIVITY OF THE VALUE OF THE PORTFOLIO TO CHANGES IN INTEREST RATES. IT IS USED TO CALCULATE AN APPROXIMATION OF THE MODIFIED DURATION OF A BOND WITH AN EMBEDDED OPTION.

<sup>x</sup>MODIFIED DURATION - MEASURES THE SENSITIVITY OF THE VALUE OF THE PORTFOLIO TO CHANGES IN INTEREST RATES. IT FOLLOWS THE CONCEPT THAT INTEREST RATES AND BOND PRICES MOVE IN OPPOSITE DIRECTIONS. A MODIFIED DURATION OF 6 YEARS IMPLIES THAT A 1% INCREASE IN THE INTEREST RATE WILL REDUCE THE VALUE OF THE PORTFOLIO BY 6%; AND VICE-VERSA FOR A DECREASE IN THE INTEREST RATE.

SENSITIVITY DATA AS AT 19 JUNE 2025.

<sup>^</sup>EFFECTIVE DURATION - AN OPTION ADJUSTED MEASURE OF THE SENSITIVITY OF THE VALUE OF THE PORTFOLIO TO CHANGES IN INTEREST RATES. IT IS USED TO CALCULATE AN APPROXIMATION OF THE MODIFIED DURATION OF A BOND WITH AN EMBEDDED OPTION.

<sup>2</sup>MODIFIED DURATION - MEASURES THE SENSITIVITY OF THE VALUE OF THE PORTFOLIO TO CHANGES IN INTEREST RATES. IT FOLLOWS THE CONCEPT THAT INTEREST RATES AND BOND PRICES MOVE IN OPPOSITE DIRECTIONS. A MODIFIED DURATION OF 6 YEARS IMPLIES THAT A 1% INCREASE IN THE INTEREST RATE WILL REDUCE THE VALUE OF THE PORTFOLIO BY 6%; AND VICE-VERSA FOR A DECREASE IN THE INTEREST RATE.

## Appendix A: Glossary of terms

**Active Management:** Investing with the goal of outperforming a benchmark index.

**Alpha:** A manager's return relative to the return of a benchmark. For example, consider an active manager with the S&P/ASX 200. If the manager returned 5% when the S&P/ASX 200 Index returned 4%, then the alpha would be 1%. Note that alpha can be both positive and negative, shown as outperformance and underperformance, respectively.

**Authorised Participant:** Large investors, institutions, exchange specialists and arbitrageurs that place orders for creation units with the fund's distributor.

**Beta:** In the context of this report, beta refers to the sensitivity of in response to swings in the market. A beta of 1 indicates that a fund's unit price return will move in line with a benchmark. Whereas, a beta of greater than 1 indicates that a fund's unit price return will be more volatile than the market, and vice versa.

**Credit Rating:** Forward-looking opinions about credit risk based on the ability and willingness of an issuer, such as a corporation or government, to meet their financial obligation in full and on time.

**Derivative Replication:** The process in which a portfolio manager seeks to replicate performance.

**Effective Duration:** An option adjusted measure of the sensitivity of the value of the portfolio to changes in interest rates. It is used to calculate an approximation of the modified duration of a bond with an embedded option.

**Exchange Traded Fund (ETF):** Investment vehicles that are constructed in the same nature as a mutual fund, but which trade on a stock exchange. ETFs combine the diversification benefits of mutual funds, with exposure to a wide array of assets in a single trade, and typically track the performance of a broad market index, sector, commodity or theme.

**Franking:** A tax credit used in Australia that allows domestic companies to pass through taxes that have already been paid on corporate profits. Given the trust structure, ETFs are required to distribute all capital gains, earnings and franking credits to underlying unit holders.

**Free-Float:** The amount of a company's shares outstanding that are available for purchase on the open market at any point in time.

**Full Replication:** The process in which a portfolio manager seeks to replicate performance by exactly matching the benchmark in composition and weight to ensure a similar outcome. The ETF will hold 90% or more of the members of the index in this instance.

**Grossed-Up Dividend Yield:** Dividends paid plus any associated franking credits, if available.

**Liquidity:** The ability to convert a security or asset quickly into cash.

**Management Expense Ratio (MER):** Management Fees help to recoup expenses incurred in connection to the operation of the fund (such as administration and accounting costs, registry fees, audit and tax fees and investor reporting expenses), expressed as a proportionate value of the fund. This is calculated daily and deducted from the fund's Net Asset Value. No costs are directly borne by the investor.

**Market-Capitalisation:** The value of a publicly listed company, calculated as the product of price and units/shares outstanding.

**Modified Duration:** Measures the sensitivity of the value of the portfolio to changes in interest rates. It follows the concept that interest rates and bond prices move in opposite directions. A modified duration of 6 years implies that a 1% increase in the interest rate will reduce the value of the portfolio by 6%; and vice-versa for a decrease in the interest rate.

**Net Asset Value (NAV):** The value of the underlying assets of the Fund minus its liabilities, divided by the number of units outstanding. This is typically calculated at the end of each business day.

**Optimised Replication:** The process in which a portfolio manager seeks to replicate an index by using a representative basket of securities. Optimisation is generally used in markets where liquidity may be limited or costs are prohibitive for full replication. The ETF will hold less than 90% of the members of the index in this instance.

**Passive Management:** Investing in an attempt to track the return of an underlying benchmark index or asset.

**Performance Fee:** Fees linked to the value added by a fund manager, calculated on the relative outperformance of the benchmark index or absolute return performance hurdle, often subject to a high watermark mechanism.

**Sharpe Ratio:** This ratio provides a measure of the return of an ETF's portfolio, relative to the risk taken by the investment manager in achieving those returns. A higher return is only desirable if it does not come with too much additional risk (volatility of returns).

**Smart Beta:** Strategy with blended components of both Passive and Active Management. It seeks to capitalise on predetermined thematic or rules-based methodologies for investing, attempting to outperform, or have less risk than, traditional broad market cap weighted indices.

**Spread:** The gap between the highest price that a buyer is willing to pay (bid), and the lowest price for which a seller is willing to sell (ask), on a particular security.

**Appendix C: How an ETF operates**

ETFs are open ended securities that trade on an exchange. Open ended denotes that new products can be created and redeemed on the Primary Market, without the requirement to release a new prospectus, ad infinitum. The open ended nature of ETFs is unique to this product class, and what keeps the underlying Net Asset Value (NAV) in line with the assets' market price. This process is managed by the Authorised Participants and Market Makers who are engaged by the ETF operator to continually create and redeem shares to ensure the discount to NAV is managed within a defined range.

This results in a two tiered market structure: The Primary Market and the Secondary Market. The Primary Market is the market in which Market Makers, via the Authorised Participants, are able to create and redeem units. The Secondary Market is the market in which investors are able to buy and sell these units on an exchange.

**Mechanics of the Primary Market**

The Authorised Participant applies to the issuer to create new ETF units via creation units. In return for each creation unit, the Authorised Participant will deliver a basket of securities that has been specified by the Issuer. This basket will be transferred and held by a Custodian. Following settlement, the Authorised Participant has an inventory of ETF securities (shares) that can be accessed by the Market Makers and sold on the ASX in the Secondary Market.

The redemption process operates in a similar manner. The Authorised Participant applies to redeem the securities in creation units. In return for each creation unit, the Authorised Participant will receive a basket of securities in kind. Each ETF security effectively represents a sliver of a creation unit.

**Mechanics of the Secondary Market**

The Secondary Market is the market in which investors are able to buy and sell ETF units with the assistance of the Market Maker. The Market Maker will access the Authorised Participants (Primary Market) if additional inventory is required (create) or alternatively sold (redeem), to in effect make the market. Hence, the liquidity of the ETF is as liquid as the underlying market.

The Market Maker effectively ensures liquidity in the market place by quoting Buy and Sell prices during the trading day. These prices are continuously updated to reflect the underlying changes in the securities. The ETF Issuer generally has a formal arrangement with at least one Market Maker with a mandate to make the market within a specified range of spread. However, in dislocated markets, Market Makers can suspend operations until the market stabilises.
